1 Executive summary

This project delivers a polished, mobile-friendly website for TeaYoung Boba Tea and its two Noida locations: Godavari Complex in Sector 37 and Shop no 17, Golf Avenue, behind Spectrum Mall in Sector 75. The site is designed as a simple digital front door: it introduces the café, makes the verified menu easy to scan, showcases real drinks and storefront imagery, and helps visitors find either location or contact the business directly.

The design deliberately avoids reproducing the complexity of a large restaurant website. Instead, it uses a focused single-page structure with clear navigation, editorial typography, a warm colour palette, responsive layouts, and small interactions such as menu tabs, a mobile navigation drawer, animated entrance details, a map link, and a working contact form state. The result is intended to feel like a real local café brand rather than an AI-generated template.

2 Business profile

TeaYoung Boba Tea is a neighbourhood boba, beverage, and Korean ramyun café with two Noida locations. The first is listed at Shop K-4, Godavari Complex, Arun Vihar, Sector 37. The second owner-confirmed location is Shop no 17, Golf Avenue, behind Spectrum Mall, Sector 75, Noida, Uttar Pradesh 201316. The owner also confirmed the public contact number, +91 88513 72876, and approved the use of the supplied business information and images for this website.

The website concept frames TeaYoung around a repeatable customer ritual: a drink after class, a casual catch-up, a study break, or a small treat after work. The copy therefore emphasizes warmth, playfulness, and neighbourhood familiarity rather than making unsupported claims about awards, recipes, or business history.

Business name	TeaYoung Boba Tea
Category	Boba tea, tea, coffee, beverages, desserts, and quick bites
Locations	Godavari Complex, Sector 37; and Shop no 17, Golf Avenue, behind Spectrum Mall, Sector 75, Noida
Publicly listed context	Vegetarian-friendly, takeaway available, digital payments accepted
Website role	A welcoming information hub for discovery, menu browsing, directions, calls, WhatsApp messages, and inquiries
Permission status	Owner approval for the business information and supplied images was confirmed by the project requester

3 Website goals

The primary goal is to help a first-time visitor understand TeaYoung within a few seconds. The hero section communicates the brand mood and location context, while the main navigation provides direct routes to the story, menu, visit details, and contact form. The site is not intended to replace a full ordering platform in this first version.

A second goal is to make the business easier to find. The visit section presents both addresses, the confirmed phone number, Instagram, and direct Google Maps search links. A third goal is to establish a credible visual identity using the clean TeaYoung wordmark found through the supplied business-listing context.

4 Target audience

The primary audience is local students, young professionals, families, and friend groups in and around Sectors 37 and 75, Noida. These visitors are likely to discover the café through Instagram, maps, food listings, or word of mouth. They need quick access to the menu, both locations, hours, phone contact, and a reason to visit.

The secondary audience is a potential café owner or manager reviewing the project. For that audience, the site demonstrates how a small business can present its atmosphere and practical information without needing a large content-management system or a complex multi-page build.

5 Required features and implemented features

The following feature set translates the assignment brief into an intentionally compact website. Each feature is implemented as part of the current frontend build.

Area	Purpose	Implementation
Homepage / hero	Immediate brand impression and primary call to action	Responsive hero, custom cup illustration, CTA buttons, animated artwork
Our story	Explain the café experience in human terms	Editorial copy, image collage, quote card, neighbourhood framing
Menu	Let visitors browse verified products and prices	Tabbed categories for creamy milk boba, iced popping drinks, and Korean ramyun
Gallery	Show the real café, drinks, and menu	Owner-approved TeaYoung photographs in a responsive editorial grid
Experience section	Show the atmosphere and reasons to stay	Photography panel, café perks, free Wi-Fi and fresh-brew messaging
Visit / location	Make both cafés easy to reach	Two addresses, confirmed phone number, Instagram, individual map links, and dual-location map panel

Contact	Give visitors a low-friction inquiry path	Name, email, message fields and client-side success state
Responsive behavior	Keep the experience usable on phones	Mobile navigation, stacked sections, fluid type, mobile-friendly controls

6 Design direction

The chosen visual direction is called **late-afternoon café editorial**. It takes a small amount of inspiration from the supplied WAB Coffee Co. reference—confident section rhythm, strong food-and-drink storytelling, and a premium café mood—without copying its structure or visual density.

The palette combines deep espresso for contrast, soft cream for the page background, guava coral for action and emphasis, muted mint for the hero, and a warm yellow for highlights. The display typeface is Playfair Display, chosen for its expressive editorial character. DM Sans keeps paragraphs and controls readable, while DM Mono is used sparingly for small labels and navigation metadata. The resulting hierarchy is intentionally asymmetric: large serif headlines sit beside quieter explanatory copy, while the menu uses a simple numbered list instead of cards everywhere.

Motion is restrained. The hero cup floats gently, the ticker moves slowly, menu items enter with short staggered transitions, and buttons respond with a small lift. The stylesheet includes a reduced-motion preference so non-essential animation is minimized for users who request it. The redesigned gallery uses only owner-approved TeaYoung drink and storefront photographs; the low-resolution menu screenshot was removed rather than stretched as a decorative image. The header and footer use the clean official TeaYoung wordmark.

7 Wireframe and information architecture

The first wireframe is a single-page flow because the assignment needs a clear, small-business website rather than a large application. The structure is as follows:

Order	Section	Content blocks
01	Hero	Brand mark, headline, short introduction, explore-menu CTA, visit CTA, illustrated drink
02	Ticker	Short brand phrases and location cue
03	Our story	Story headline, explanatory copy, image collage, quote card
04	Menu	Category tabs, menu rows, prices, dietary note
05	The vibe	Atmosphere image, café copy, Wi-Fi / coffee / bites perks
06	Gallery	Owner-approved drink, counter, and menu photography

07	Find us	Two addresses, phone contact, social link, map panel, directions CTAs
08	Say hello	Confirmed phone number, WhatsApp link, inquiry form
09	Footer	Navigation, social link, owner-approval note, copyright

This flow prioritizes the user's most likely questions in order: what is this place, what does it feel like, what can I order, where is it, and how do I contact it. On mobile, the navigation collapses to a menu button and the multi-column areas become a single readable column.

8 Technology and AI use

The site uses a frontend-only stack of React, TypeScript, Vite, Tailwind CSS, and custom CSS. React manages the interactive menu tabs, mobile navigation, and contact-form success state. TypeScript improves maintainability and catches structural errors during development. Vite provides the local development server and production build process. No backend or database is required for this assignment version.

AI was used as an assistant for code structure, content drafting, responsive layout ideas, image placement, and design iteration. Human decisions were made about the business framing, information hierarchy, visual palette, typography, feature scope, and the separation between verified facts and unconfirmed details. The current menu names and prices were transcribed from owner-supplied TeaYoung menu photographs.

9 Hosting and submission plan

The project is published as a static website using free GitHub Pages hosting. Its source and assignment materials are organized in a public GitHub repository. The deployed version is checked on desktop and mobile widths, and the owner-approved photographs, menu information, phone number, locations, and external links are included in the current build. Opening hours are intentionally omitted until the owner confirms them.

The assignment submission package should contain three items: this summary PDF, the live website link, and the source-code repository link. The final live link and repository link are added after the hosting and GitHub authorization steps are completed.

10 Validation and limitations

The current preview was checked at desktop width and at a 390 × 844 mobile viewport. TypeScript and language-service checks reported no errors. The responsive navigation, menu tabs, owner-approved gallery, two location links, social link, phone link, WhatsApp link, and contact-form success state are implemented. The form remains a frontend interaction; visitors are directed to WhatsApp for actual delivery.

The remaining limitation is source-photo resolution. The supplied drink photographs are suitable at controlled portrait sizes, but they should not be enlarged beyond those dimensions. Higher-resolution

originals would improve future full-width photography. Opening hours remain intentionally omitted until confirmed for each location.

11 References

The business context was based on the supplied public listings and references. They are included for traceability, not as a substitute for an owner interview.
