1 Executive summary

This project proposes a polished, mobile-friendly website for TeaYoung Boba Tea, a small beverage and quick-bites café located at Shop K-4, Godavari Complex, Arun Vihar, Sector 37, Noida. The site is designed as a simple digital front door: it introduces the café, makes the menu easy to scan, communicates the in-store atmosphere, and helps visitors find the location or send an inquiry.

The design deliberately avoids reproducing the complexity of a large restaurant website. Instead, it uses a focused single-page structure with clear navigation, editorial typography, a warm colour palette, responsive layouts, and small interactions such as menu tabs, a mobile navigation drawer, animated entrance details, a map link, and a working contact form state. The result is intended to feel like a real local café brand rather than an AI-generated template.

2 Business profile

TeaYoung Boba Tea is presented as a neighbourhood boba and beverage stop in Sector 37, Noida. Public listing information identifies the location as Shop K-4, Godavari Complex, Arun Vihar, Sector 37, Noida. The listing also describes the business as vegetarian-friendly, suitable for takeaway, and accepting digital payments. The average listed cost is approximately ₹400 for two people, subject to applicable taxes and charges. These facts are treated as reference information and should be confirmed with the owner before publication.

The website concept frames TeaYoung around a repeatable customer ritual: a drink after class, a casual catch-up, a study break, or a small treat after work. The copy therefore emphasizes warmth, playfulness, and neighbourhood familiarity rather than making unsupported claims about awards, recipes, or business history.

Business name	TeaYoung Boba Tea
Category	Boba tea, tea, coffee, beverages, desserts, and quick bites
Location	Shop K-4, Godavari Complex, Arun Vihar, Sector 37, Noida
Publicly listed context	Vegetarian-friendly, takeaway available, digital payments accepted
Website role	A welcoming information hub for discovery, menu browsing, directions, and inquiries
Permission status	Owner permission should be obtained and recorded before public showcase or use of final business details

3 Website goals

The primary goal is to help a first-time visitor understand TeaYoung within a few seconds. The hero section communicates the brand mood and location context, while the main navigation provides direct routes to the story, menu, visit details, and contact form. The site is not intended to replace a full ordering platform in this first version.

A second goal is to make the business easier to find. The visit section presents the address, opening hours, Instagram link, and a direct Google Maps search link. A third goal is to establish a credible visual identity

without inventing a logo. The wordmark treatment is a lightweight typographic lock-up for the concept site; it is not presented as the business's official logo.

4 Target audience

The primary audience is local students, young professionals, families, and friend groups in and around Sector 37, Noida. These visitors are likely to discover the café through Instagram, maps, food listings, or word of mouth. They need quick access to the menu, location, hours, and a reason to visit.

The secondary audience is a potential café owner or manager reviewing the project. For that audience, the site demonstrates how a small business can present its atmosphere and practical information without needing a large content-management system or a complex multi-page build.

5 Required features and implemented features

The following feature set translates the assignment brief into an intentionally compact website. Each feature is implemented as part of the current frontend build.

Area	Purpose	Implementation
Homepage / hero	Immediate brand impression and primary call to action	Responsive hero, custom cup illustration, CTA buttons, animated artwork
Our story	Explain the café experience in human terms	Editorial copy, image collage, quote card, neighbourhood framing
Menu	Let visitors browse a small representative selection	Tabbed categories for boba, tea and coffee, and little bites
Experience section	Show the atmosphere and reasons to stay	Photography panel, café perks, free Wi-Fi and fresh-brew messaging
Visit / location	Make the café easy to reach	Address, hours, Instagram, Google Maps link, stylized map panel
Contact	Give visitors a low-friction inquiry path	Name, email, message fields and client-side success state
Responsive behavior	Keep the experience usable on phones	Mobile navigation, stacked sections, fluid type, mobile-friendly controls

6 Design direction

The chosen visual direction is called **late-afternoon café editorial**. It takes a small amount of inspiration from the supplied WAB Coffee Co. reference—confident section rhythm, strong food-and-drink storytelling, and a premium café mood—without copying its structure or visual density.

The palette combines deep espresso for contrast, soft cream for the page background, guava coral for action and emphasis, muted mint for the hero, and a warm yellow for highlights. The display typeface is Playfair Display, chosen for its expressive editorial character. DM Sans keeps paragraphs and controls readable, while DM Mono is used sparingly for small labels and navigation metadata. The resulting hierarchy is intentionally asymmetric: large serif headlines sit beside quieter explanatory copy, while the menu uses a simple numbered list instead of cards everywhere.

Motion is restrained. The hero cup floats gently, the ticker moves slowly, menu items enter with short staggered transitions, and buttons respond with a small lift. The stylesheet includes a reduced-motion preference so non-essential animation is minimized for users who request it. Images currently use temporary café photography placeholders; the owner can replace them with approved TeaYoung photographs later.

7 Wireframe and information architecture

The first wireframe is a single-page flow because the assignment needs a clear, small-business website rather than a large application. The structure is as follows:

Order	Section	Content blocks
01	Hero	Brand mark, headline, short introduction, explore-menu CTA, visit CTA, illustrated drink
02	Ticker	Short brand phrases and location cue
03	Our story	Story headline, explanatory copy, image collage, quote card
04	Menu	Category tabs, menu rows, prices, dietary note
05	The vibe	Atmosphere image, café copy, Wi-Fi / coffee / bites perks
06	Find us	Address, hours, social link, map panel, directions CTA
07	Say hello	Contact explanation, phone/email placeholders, inquiry form
08	Footer	Navigation, social link, ownership note, copyright

This flow prioritizes the user's most likely questions in order: what is this place, what does it feel like, what can I order, where is it, and how do I contact it. On mobile, the navigation collapses to a menu button and the multi-column areas become a single readable column.

8 Technology and AI use

The site uses a frontend-only stack of React, TypeScript, Vite, Tailwind CSS, and custom CSS. React manages the interactive menu tabs, mobile navigation, and contact-form success state. TypeScript improves maintainability and catches structural errors during development. Vite provides the local development server and production build process. No backend or database is required for this assignment version.

AI was used as an assistant for code structure, content drafting, responsive layout ideas, and design iteration. Human decisions were made about the business framing, information hierarchy, visual palette, typography, feature scope, and the choice to label owner confirmation as pending rather than inventing official details. The current menu names and prices are illustrative placeholders and should be replaced with an approved menu before the website is used commercially.

9 Hosting and submission plan

The project is prepared as a static website suitable for free hosting. Its source is organized in a Git repository and can be published through GitHub Pages or another static host. The deployed version should be checked on both desktop and mobile widths, and the owner should review all copy, images, opening hours, phone number, menu items, and links before the final public showcase.

The assignment submission package should contain three items: this summary PDF, the live website link, and the source-code repository link. The final live link and repository link are added after the hosting and GitHub authorization steps are completed.

10 Validation and limitations

The current preview was checked at desktop width and at a 390 × 844 mobile viewport. TypeScript and language-service checks reported no errors. The responsive navigation, menu tabs, external location links, social link, and contact-form success state are implemented. The contact form is a frontend demonstration and does not yet send email or store submissions.

The most important limitation is that owner permission and final business data have not yet been independently confirmed in this session. Before submitting the site as an official business website, obtain written permission from the owner and replace all concept placeholders with approved assets and contact information.

11 References

The business context was based on the supplied public listings and references. They are included for traceability, not as a substitute for an owner interview.
